Topics: Adjustment, FAQs, Video

Day 1 can be set to represent any day of the week. In the **Current Date and Time** setting you'll be required to set today's day, this will provide the controller a reference point.

Example:

If today is Friday and you set the current day as the number 5, you've now established that the 1st day or Day 1 would be Monday.

The majority of time Day 1 is set as Sunday or Monday.
