Topics: Adjustment, FAQs, Installation Procedures

The Hunter XCore controller comes with an Interval Watering feature. This feature is adjusted under the **Water Days** dial position on the controller.

Interval Watering is a feature that allows you to select the number of days to pass before the next watering day.

Selecting Interval Watering

With this option you can select interval watering from 1 to 31 days.

1. With the cursor on EVEN, press the ➡ button once and the  icon will appear and a 1 flashing in the display.
2. Press the  or  button to select the number of days between watering (from 1 to 31 days).

The controller will water the selected program at the next start time and will then water at the interval programmed.

An interval of 3 will cycle the program once every three days and water on every third day from there on out. An interval of 1 waters every day and an interval of 2 waters every other day.
