Hunter Field Server Installation Guide

The field server can be installed anywhere with the host network, including near a Hunter controller enclosure. Field servers can also be rack mounted in a central network location.

1. Install the field server with the standard DIN rail connector.
2. Connect to the server with the “Eth1” RJ-45 port. (The “Eth2” is for WAN use, if applicable.)
3. Connect the field server power with the supplied power connector. This can either be 9 - 30 VDC, or 24 VAC.

2

Power to Gateway	Gateway Pin Label	Pin Assignment
Power in (+)	L+	V+
Power In (-)	N-	V-
Frame Ground	FG	Frame GND

Install the Ethernet communication module for the controller (A2CLAN or A2CWIFI for ACC2, WIFIKIT or LANKIT for ICC2).

Connect the Hunter LAN/Wi-Fi module to the network.

Once the Hunter controller and the field server are connected to the same network, you can log in and finish setting up the field server.

3

Accessing a Gateway Through the Web Interface

Make sure the computer's IP address is in the same subnet mask as the gateways. To do this, navigate to the computer's Settings > Network & Internet > Change adapter options.

1. Open the browser.
2. Type in the IP address of the field server/gateway.
The default address is: 192.168.2.101.

4

3. Continue with HTTP.

Note: This can be changed later.

4. Enter the default username: admin

5. Enter the password. This can be found on the back of the gateway.

6. Choose HTTP and press Save. **Note: This can be changed later to increase security.**

5

Notes About Passwords:

- Lower case Ls appear as a line “|”
- Upper case Ls appear as the roman numeral “I”
- The number one appears as “1”
- You can scan the QR code for the password

6
