Proven Water Saver with Predictive Watering®

Hydrawise Software automatically adjusts watering schedules based on local weather conditions, so you don't have to manually adjust controllers on-site. You can also modify watering or suspend irrigation for every controller on your account.

Build a Stronger Business

Thanks to Hydrowise alerts, you can deliver top-level service to every customer by fixing broken pipes or faulty solenoids before costly landscape damage occurs.

IN THE FIELD

1 Challenge: Your customer just called. There's a big puddle in his yard and he wants you to immediately drive to the site to diagnose the problem.

Solution: The flow monitoring feature in Hydrawise Software detects the leak immediately and suspends the zone's next watering cycle. It also sends an alert to your phone letting you know where the leak occurred so you can proactively schedule a maintenance appointment.

2 Challenge: Your customer is upset about some dying plants. She noticed that irrigation is not working in that area and wants you to pay for a replant.

Solution: With Hydrawise Software, you receive an instant alert when valves fail. This means you can quickly fix the problem before any plants are lost.

IN THE DESIGN OFFICE

- Save hundreds of hours of travel and labor on controller adjustments during unexpected weather events with total remote access.
- Achieve significant labor savings at each location using the Hydrawise App. You can prepare for winterization and spring startup with just one crewmember.
