When pressure regulation is not used, each head will have a different pressure depending on its location on the line. The pressure-regulated Pro-Spray PRS40 will precisely regulate each head to 2.8 bar.

The MP Rotator® uses rotating multi-stream, multi-trajectory technology to achieve water-conserving results. It is a breakthrough solution enabling levels of conservation that are increasingly necessary and even mandated.

Multiple Streams
COUNTLESS BENEFITS

MULTI-STREAM TECHNOLOGY MAXIMISES THE WATER EFFICIENCY OF YOUR IRRIGATION SYSTEM

SUPERIOR EFFICIENCY
Multiple rotating streams provide excellent coverage

MINIMAL RUNOFF
Low application rate reduces runoff

MP ROTATOR TECHNOLOGY
Proven durability in demanding conditions

SUPERIOR DIRT TOLERANCE
“Double-pop” feature keeps the nozzle free of external debris

SIMPLE INSTALLATION
Installs easily on any spray body; perfect for retrofits. Choose the MP-HT for female-threaded spray bodies.

Save Water the Smart Way

The MP Rotator® uses rotating multi-stream, multi-trajectory technology to achieve water-conserving results. It is a breakthrough solution enabling levels of conservation that are increasingly necessary and even mandated.
HIGH UNIFORMITY
Water is delivered evenly at 10 mm/hr with the standard MP Rotator and 20 mm/hr with the MP800 Series, more closely matching what soils can absorb.

HOW DOES THE MP ROTATOR CONSERVE MORE WATER?
The MP Rotator’s incomparable uniformity places water at the precise location needed at a rate soils can absorb. Traditional sprays apply water at a rate that most soils cannot absorb, causing runoff. The inconsistent uniformity of traditional sprays results in over- or underwatered areas.

MP Rotators outperform landscape dripline installed under turf or landscape beds. Drip lines apply water at point locations that result in uneven water distribution and overwatering.

CONSERVING WATER IS EVERYONE’S RESPONSIBILITY With MP Rotator® solutions from Hunter Industries, multi-trajectory rotating streams provide superior uniformity with a low application rate that reduces runoff — and water bills. Retrofit a system with MPs, and see water use reduced by 30% or more.

USE 30% LESS WATER and Avoid Runoff

LOW UNIFORMITY
Water is dispersed at 40 mm/hr, causing flooding that leads to runoff.
