

Slow the Flow

and Avoid Runoff with Hunter's Proven Water Savers

Hunter®

Here are a few simple changes to significantly reduce outdoor water use.

1 Replace Inefficient Sprays with MP Rotator® Nozzles

Keep existing turf and landscaping while realizing **up to 30% water savings**. The MP Rotator applies multiple streams of water slowly and evenly that gently soak into the soil without runoff or misting.

2 Reduce Flow Rates with Pro-Spray® PRS Pop-ups

Install pressure-regulated spray heads for **up to 30% reduced water use**. Hunter Pro-Spray PRS30 and PRS40 are designed for increased efficiency with spray and MP Rotator nozzles.

3 Convert Areas to Drip Irrigation

Reduce turf and convert sprays to Hunter Dripline (HDL) to achieve **up to 70% water savings**. Drip irrigation provides close-in watering right where it is needed with no overspray.

4 Add an HC Flow Meter to Monitor Water Use

Install a flow sensor to track on-site water use, provide overflow protection, and protect the landscape in the event of a broken pipe or sprinkler.

5 Experience the Difference of Smart Watering

Hydrawise® irrigation management automatically adjusts watering schedules based on real-time weather data to **reduce water use by up to 50%**. Learn more at hydrawise.com.

EPA WaterSense Approved
Recognized as a responsible water-saving tool by the U.S. Environmental Protection Agency.

Other Ways to **Save Water**

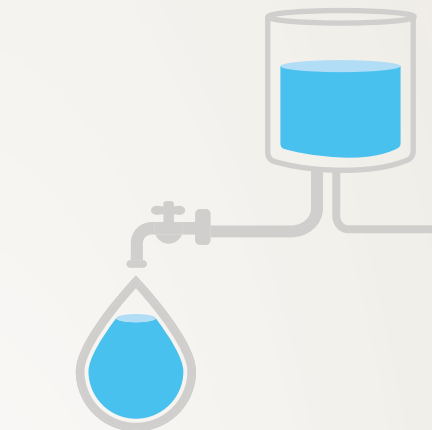

Check the System

Work with your landscape maintenance contractor to assess the performance of your irrigation system. Check for leaks, clogs, and wear that could be silently wasting countless gallons of water. At a minimum, adjust sprinkler nozzles to eliminate overspray onto surrounding hardscapes.

Plant Responsibly

Be selective with turf areas. Keep turf only where practical and use a regionally appropriate variety. Replace thirsty plants with native and drought-tolerant plants. Add mulch to reduce evaporation and moderate soil temperature.
