When installed with a rain sensor, the Hunter Clik-Delay is designed to delay controller activation for 48 hours after the rain has stopped.

The Clik-Delay works with Hunter’s Rain-Clik®, and Mini-Clik® sensors, wired or wireless.

Simply follow the installation instructions and the battery-powered Clik-Delay will operate automatically.

1. Connect both White with Blue-striped wires to the incoming sensor wires from the field.

2. Connect both Gray wires to the Sensor (SEN) terminals on the controller.

**NOTE:** incoming wires from the individual sensors may have different colored wires.
