

# Rethink Wi-Fi Control WITH X2™ AND WAND

**Easy-to-Use Dial and Buttons**  
*For rapid, ABC-style programming*

**Rapid Programming™**  
*Assign default schedules online in seconds*

**Backlit Display**  
*Simple to read in any environment*

**Easily Upgrade to Wi-Fi**  
*Maximum water savings and total remote access*

**Water Up to 14 Zones**  
*Healthy landscapes mean happy clients*

**Hydrawise® Smart Irrigation**  
*The X2 Controller with the WAND Wi-Fi Module connects to the Hydrawise Platform, the leading smart irrigation solution for contractors and homeowners*

**Better Management Software**  
*Faster installation, easy setup, and more time to do what you love!*

## COMPETITOR

### MECHANICAL DISADVANTAGES

- Maximum station size is 12 with only one common terminal output
- No help text is displayed on the controller LCD when connecting the controller to the homeowner's Wi-Fi network, which means additional time and support is required
- Wi-Fi LED and setup buttons are hidden in the wiring compartment
- Lock hasp hole only fits smaller padlocks, which are vulnerable to breaking

### SOFTWARE DISADVANTAGES

- No convenient desktop version is available for remote management, so additional time on small-screen mobile devices is required
- Difficulty connecting to Wi-Fi has led to user frustration and negative software reviews
- Shared remote access to the controller using the homeowner's account leads to problems when staff turnover occurs
- Lacks contractor tools such as advanced reporting, job sheets, calendar view, and controller change logs
- No Cycle and Soak for runoff prevention or Hidden Programs feature to limit homeowner confusion
- Email notifications and app alerts stop when controller system goes offline, leading to extra water usage as weather data becomes inaccessible
- Inability to control lighting or add personal or publicly available weather stations for advanced water savings

## X2 CONTROLLER

### MECHANICAL ADVANTAGES

- 14-station model with two common terminal outputs is ideal for a variety of residential landscapes
- Built-in molded conduit receptacle provides faster field wiring
- ROAM Remote capable for convenient on-site maintenance with or without Wi-Fi
- Wi-Fi LED and setup buttons are easy to see and access on the controller
- Larger hasp lock hole allows installation of bigger, sturdier locking devices
- Ergonomically designed dial and programming buttons are easier to use

### SOFTWARE ADVANTAGES

- Bluetooth® Wi-Fi tether for faster internet setup
- Two additional Wi-Fi setup options with helpful LCD setup messages on the controller
- Convenient app and desktop control with automatic schedule backups via the cloud
- Hydrowise scheduling to any X2 Controller for full setup in seconds with Rapid Programming™ Technology
- End users and contractors do not share accounts, which ensures maximum security, accountability, and customer privacy
- Configure Virtual ET settings, Predictive Watering® Technology triggers, personal weather stations, and multiple weather stations for water savings up to 50%
- Hydrowise watering schedules provide additional start times and longer run times for plant requirements in any environment
- View controller logs and receive real-time system alerts for quicker maintenance
